Ph: [+1\(603\)943-9002](tel:+1(603)943-9002)

## SUMMARY

- Successful DevOps Engineer with Over 5 years of professional Experience dedicated to Cloud, DevOps automation and Cloud Infrastructure (cost optimization, governance). I enjoy Designing, Implementing, and Supporting applications in the AWS, GCP cloud infrastructure. I'm a highly motivated, productive team player looking to lead by example. Enthusiastic about exploring new services in the DevOps area. My greatest strength is my ability to thoroughly research a requirement and design a solution that is cost-effective, resilient, fault-tolerant, and highly available. Using my cloud expertise, I have greatly contributed to multiple successful migrations to AWS from on-premise infrastructure

## TECHNICAL SKILLS

**Cloud/Container Tech:** AWS, GKE, Docker, Kubernetes, Vagrant, Packer

**Virtualization/Bare Metal Hardware:** VMware, vSphere, vCenter, Dell, Super Micro

**Configuration Management/ Infra as Code:** CloudFormation, Terraform, Ansible, Salt Stack

**Build Tools/Web/App Servers:** Git, Jenkins, Maven, Artifactory, SonarQube, Nginx, Apache, Tomcat, JBoss

**Programming Languages:** Shell Script, Python, Angular

**OS/Protocols/Database:** Linux, Windows, TCP/IP, DNS, DHCP, MySQL, AWS DynamoDB, Postgres

**Monitoring/Log:** New Relic, EFK, Splunk, Prometheus, Grafana

## INDUSTRIAL EXPERIENCE

**Staff DevOps Engineer, Blackhawk Network, Lewisville, TX**

**Sep'18-Present**

- Member of the Global DevOps organization at Blackhawk Network responsible for standardizing, provisioning and supporting infrastructure for distributed applications.
- **Cloud Governance:** Standardize the creation of several AWS resources using AWS Service Catalog. This helps our centralized DevOps team define and set standards for resources created using template level constraints and automatic tagging of resources.
- **Cost Optimization:** Lead a team to implement mixed instance types in EC2 Auto Scaling Groups across all our AWS accounts. This update has seen us launch spot instances wherever applicable and has reduced EC2 costs by over 50% per month in our non-prod accounts.
- Migrated to Application Load Balancer is more cost effective than Classic Load Balancer. For CLB's with high resource utilization, migrating to ALB saved 47% per month on our production accounts.
- Accomplished immutable infrastructure using **CloudFormation** and **Terraform** to deploy infrastructure in cloud/on-premises.
- Implemented and improved Jenkins **CICD** process using shared libraries for Java, Angular, Nodejs, Django, Python, Ruby & Rails languages. Unit Tests, Xray, SCA Scan using Jenkins DSL, Shell and Groovy programming. Wrote custom Jenkinsfiles to call different stages and build components of shared libraries to help engineers reduce the time of build and deployment.
- Saved 40K in cloud hosting and improved performance by migrating monolith applications to modern microservices architecture and deployed into ECS Fargate/Kubernetes.
- Worked with the development team to configure New Relic APM, to trace the performance of API's, Infrastructure agents in servers and setup alerts. To reduce troubleshooting time, configured ELK clusters using Elasticsearch. Configured dashboards and visualizations in Kibana

**Senior DevOps Engineer, Saibersys Inc | Nexient Inc, Ann Arbor, MI**

**Oct'17-Aug'18**

- **Cloud Migration:** Worked on a time-critical migration project called Hawk Incentives to successfully migrate all components (web, app servers and databases, Windows AD) of an acquisition made by Blackhawk Network from on-premise to AWS. This resulted in cost savings of over 40% on a monthly basis.
- **Cloud Security:** Collaborated with the InfoSec team to provision and configure several third-party tools such as Rapid7, Red lock (Prisma cloud) for maintaining governance and enforcing compliance across three of our production AWS accounts.
- Reduced Docker images size by 40% which saved server resources like CPU and memory by using multistage Docker files and deployed them in ECS/EC2. Involved in migrating to microservices architecture from legacy monolith architectures.

**Senior DevOps Engineer, Saibersys Inc | HGST a Western Digital, San Jose, CA**

**Jul'16-Aug'17**

- Automated Installation, configuring and administration the Linux VM's on ESXI servers Using Vagrant and Implemented the automated factory installation on Active Scale X100 and Active Scale P100 hardware, Supporting TAAS (Test Drive as a Service) multiple geographical locations from Belgium, Las Vegas and San Jose.
- Experience in writing the YAML files for Jenkins Job Builder for Dynamic Jenkins jobs configuration. Installation, configuration and administration experience in revision management tool Gitlab, Jenkins, Maven, Nexus, Docker, Kubernetes.
- Written Dockerfiles to Isolate Java Spring, Python, Nodejs, Angular, Django applications images using docker.

**DevOps Engineer, Saibersys Inc | Cisco, San Jose, CA**

**Dec'15-Apr'16**

- Developed Ansible Playbooks and roles to launch Jenkins master, nodes, plugin installation, system configuration and configure all Jenkins jobs. Implemented Infrastructure as code which eliminated manual changes to Jenkins jobs and misconfigurations.
- Reduced Docker images size by 40% which saved server resources like CPU and memory by using multistage Docker files and deployed them in ECS/EC2. Involved in migrating to microservices architecture from legacy monolith architectures.

**Build and Release Engineer, Unwired Labs, Hyderabad, Telangana**

**Jan'13-Jul'14**

- Worked on Installing, Configuring, and Administration tasks in the Gitlab Source code management tool. Implemented Continuous Integration and continuous deployment using Gitlab, Jenkins, Maven, Nexus Ansible.
- provisioning virtual machines on-premises using vagrant and responsible for setting up Cron jobs scripts on production servers.
- Maintained protocols like TCP/IP, NIS, NFS, DNS, SNMP, VSFTPD and DHCP FTP and Samba on Linux systems.

## EDUCATION

RIVIER UNIVERSITY, CA(USA)

*Master's in computer science*

*Aug'14-Dec'15*

- GPA: 3.82/4

ANU, GUNTUR (India)

*Batcher's in computer science*

*Sep'09-May'13*

- GPA: 7.5/10

## CERTIFICATIONS

- AWS Certified Solutions Architect Associate (saa-c01)
- Splunk 7.x Fundamentals
